

Portable key box instructions

To open the key box:

1. Turn the password round to 0-0-0-0.
2. Pull out the locking beam, press the open button, and the lid will open automatically.
3. Close the lid, insert the lock beam into the lock, and unlock the password.

To set your combination:

1. First, align the original password with the scale.
2. Insert the code change insert into the space in the side of the lock (figure 1). (Always insert it to the end, so that it doesn't pop up).
3. Move the password wheel to the password you need. (figure 2)
4. Pull out the code change insert and the password is set.
5. Special tip: after the password setting is completed, don't immediately dial up the mess, dial one of the passwords first, and test if the password is correct.
